

TRUSTESOLUTIONS™ SOFTWARE

TrusteSolutions software is a complete Web-based bankruptcy case management system. Through effective customization of case management processes TrusteSolutions software simplifies case administration and improves efficiency with its flexible framework. Trustees can get to their information quickly, automate manual processes, and focus on revenue generating functions instead of data entry.

TRUSTESERVICESSM

TrusteServices are services that trustees outsource to TrusteSolutions including routine tasks such as:

- mailings,
- word processing/correspondence,
- account reconciliation,
- data entry, and
- noticing.

With our knowledge of bankruptcy administration support, it is easy for us to provide extra administrative assistance whenever it is needed. We can also help with data extraction and migration for complex cases.

Services can be provided on an hourly basis or on a regularly scheduled monthly basis. Quality is guaranteed and rates are competitive.

TRUSTEBLOGS™

TrusteBlogs are Websites created by TrusteSolutions to make it easier for clients to share important information with other professionals and debtors.

TrusteBlogs Websites have basic tie-ins to the trustee's chapter 7 TrusteSolutions database that can be used to automatically populate the Website with relevant data. Trustees have the option to copy and paste information into their TrusteBlogs Website.

Website users can find hearing dates and times. Website users can see the documents that have been received, the documents that need to be filed, and the forms that the trustee office has created and filed.

TRUSTESOLUTIONS COLLABORATIVE

TrusteSolutions Collaborative is a complete Web-based document management system. Via a secure Internet connection users can store, retrieve, and share documents.

Users can share files securely with professionals both inside and outside of their firm. Through an invitational model, administrators control user access and can limit users to a case, a single folder, or a single file.

TrusteSolutions Collaborative saves storage space on customer servers and prevents data loss by automatically storing and backing up files remotely.

CHAPTER 11 AND RECEIVERSHIPS CUSTOM SOLUTIONS

The TrusteSolutions customizable framework can be adapted to fit the unique needs of chapter 11 trustees and receivers. Our experience in developing custom reports, functions, and utilities for trustees makes us especially qualified to gather business requirements from clients and translate them into useful software programs.
